

Lake Creek Watershed Flood Mitigation QUARTERLY PROJECTS UPDATE

AUGUST 2016

Recent Accomplishments

- ✓ Dam 101 – City Council approved an engineering contract that contains the permitting, field investigation, and design work necessary to reach 30% design plans. The Council also approved a separate contract for additional environmental investigations to support the design work.
- ✓ Dam 102 – The District is completing field and environmental investigations, and conceptual design work.

Current Activities

COORDINATION & FUNDING

- The City and UBCWCID are developing strategies with several partner permitting agencies to streamline the regulatory process as much as practicable. Efficient permitting can result in time and cost savings.
- The City anticipates contracting with a firm to assist with securing additional funding for Dam 101.

DESIGN & PERMITTING

- Dam 101 - The first efforts in the 30% design contract include a thorough geotechnical investigation that will be utilized to finalize the dam foundation design. Additional work in this contract includes additional environmental and cultural resource investigations.
- Dam 102 - The UBCWCID Board is anticipated to take action in August 2016 that would authorize preliminary (30%) design, additional environmental investigations and permit support work.

Next Major Milestones

DAM 101

- Project goal is to complete preliminary design by fall 2017.

DAM 102

- Project goal is to complete preliminary design by summer 2017.
