

Registration

BSI Online goes to great lengths to ensure that the testing companies and testers working in our communities carry all the necessary credentials. By ensuring that the companies / testers are properly licensed and that each test kit is annually calibrated, we are able to maintain a high level of program integrity. In order to properly vet your company / testers / test kits, it will be necessary for you to submit all proper and current copies of licenses / test kit calibration certificates to BSI. Here are the steps to getting registered.

- 1 Go to www.bsionlinetracking.com and complete the Testing Company Sign up Registration.
- 2 Once you login using your new user name and password, you can begin adding testers and test kits using the Manage button at the top of the screen.
- 3 Follow the simple steps to add testers and test kits to your profile.
- 4 Send BSI copies of all applicable licenses and test kit calibration certificates via email (bsionline@backflow.com) or fax (888-414-490). This is necessary to activate a new tester or test kit.

Simply click to sign up

Registration Hints

- You must have one active tester and one active test kit in the system to enter reports.
- User names and passwords are case sensitive. Please choose something secure, but also something you will remember.
- BSI Online will track the expiration dates of license and test kits on your dashboard. When the dates start to turn green, that is when you need to send in updated licenses or calibration certificates to BSI. Once they turn red, that tester / kit will be locked out until updated.
