

Utilities Criteria Manual

[PREFACE](#)

The rules and design criteria contained herein shall be known as the *Utility Criteria Manual*. The purpose of this utility manual is to establish standard principles and practices for the design and construction of utility systems within the City of Round Rock, Texas and within its extraterritorial jurisdiction. The design factors, formulae, and procedures are intended for use only as engineering guides in the design of water and wastewater systems. Responsibility for actual design remains primarily with the design engineer. Users of this manual should be knowledgeable and experienced in the theory and application of water and wastewater engineering.

In preparing this manual, we relied on *The City of Austin Utility Criteria Manual*. We wish to recognize The City of Austin staff, who, through their efforts, have helped shape the City of Round Rock's utility policy in the past. To them we say "Thank You."
